

## *Will my roof be safe?*

Including its mounting system, installing an average solar energy system on your roof will add an additional load of around 20Kg per M<sup>2</sup> covered. At this level checks will need to be made for **Building Regulations** compliance which can be a costly and time consuming process.

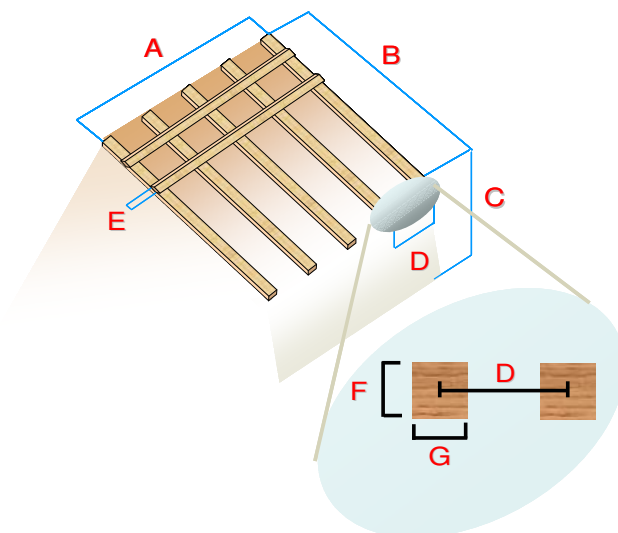

So, is your roof up to it and how do we scientifically figure if it is? If your roof needs strengthening what can be done and if it doesn't, how can we be certain that Building Regulations will be complied with?

Sounds like it has all the makings of a demanding and expensive process?

Then, how about getting all the answers for £99 and quite possibly for free?

Our 10 page, **SolarSafe Roof Survey** meticulously harvests all the key facts, figures and pictures enabling our **Chartered Structural Engineer** to answer all the above questions in the majority of cases. If he advises system installation is conditional on roof strengthening work being done, our experienced roofing teams can strengthen and install a roof mounted solar system as a single step exercise. **Now for the good news...**

A competitor recently complained to one of our customers that our prices were too low, so they're really going to love this next bit!

**Appoint us to install your system and you'll receive all of this:**

- **Refund** of your **SolarSafe Roof Survey** fee
- **Free** roof load Building Regulations [Part A] compliance Certification
- **Free** 10 year REIGA warranty covering our installation workmanship
- **Free** water tightness of roof (mounting system roof penetration points limit) Building Regulations [Part C] compliance Certification
- **£250,000** per claim Professional Indemnity cover (Solar Panel Building Regulations Parts A & C) provided by our Chartered Structural Engineer.
- Building Regulations certification provided by a highly experienced Chartered Structural Engineer
- A large helping of peace of mind!

*So, if you're looking at competitive quotes don't forget to ask how much Building Regulations compliance certification will cost. If you're told you won't need it, unless it's a new build, tell them to point their Browser at:*
