

3.96 kW SHARP PV System Welshpool

Our brave installation team have encountered numerous obstructions in the past when delivering clean energy to our clients, but nothing quite like what recently awaited them at a property near Welshpool Shropshire!

The aptly named "Psycho Duck" a wild pheasant who over the years has formed a protective bond with his neighbours from the other side of the field, proved a formidable barrier each morning as the team tried to reach the summit and safety of the scaffold.

Despite the attentions of "Psycho Duck" and the elements in just 2 days this lovely array of 22 SHARP NU 180 modules and SMA SB 4000 tl was carried out by the team. Unbelievably even with 3 inches of snow covering the modules the system was still generating electricity!

Annual Electricity Output
3399 kWh

Annual Cost Saving
£1760.00

Annual Carbon Benefit
1.80t CO2
